1. INTRODUCTION

1.1 Document Purpose

This document includes the test card details for the PAYable IPG Sandbox Testing.

1.2 Intended Audience

The document is targeted to the following personnel:

- Technical Support of the Merchants
- Technical Specialists
- Third Party Plugin Developers

1.3 Acronyms

Acronym	Definition
IPG	Internet Payment Gateway
API	Application Programming Interface
URL	Uniform Resource Locator
MPGS	Mastercard Payment Gateway Services

2. INTEGRATION TESTING WITH PAYable IPG SANDBOX ENVIRONMENT

2.1 Standard Test Card Details with MPGS

NOTE: PAYable IPG doesn't support 3-D Secure Not Enrolled cards (OTP verification is a must in live), therefore payments which perform with Visa and Mastercard cards with 3-D Secure not supported cards will be rejected in live environment.

Test Cards	Card Number	3-D Secure Enrolled
Mastercard	5123450000000008	YES
	2223000000000007	YES
Visa	4508750015741019	YES

Expiry Date	Transaction Response Gateway Code
01/ 39	APPROVED
05 / 39	DECLINED
04 / 27	EXPIRED_CARD

CSC/CVV	CSC/CVV Response Gateway Code
100	MATCH

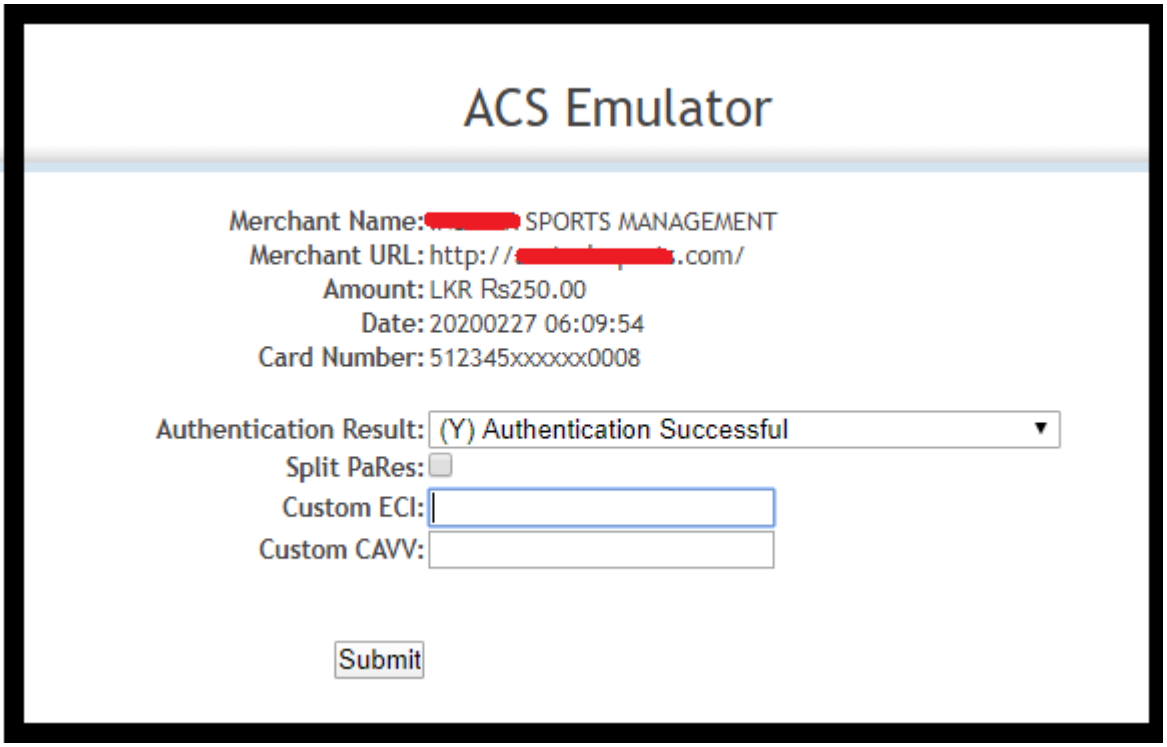
What does 3D Secure mean?

For extra fraud protection, 3D Secure (3DS) requires customers to complete an additional verification step with the card issuer when paying. Typically, you direct the customer to an authentication page on their bank's website, and they enter a password associated with the card or a code sent to their phone.

2.2 3D Secure (3DS) - (OTP Verification Process)

3D Secure should be working only for 3DS enabled Credit Cards.

MasterCard and the Card Issuing Bank will handle the 3D Secure process in the Live environment.

During the testing, you can use the ACS **Emulator** to test different 3DS scenarios.


Keep all parameters empty and select different **'Authentication Results'** to check if all paths are handled successfully.
